
Need of Interaction between Author and Related Fellow Working in that Field of Paper

Fouzul Azim Shaikh

JMI, New Delhi, India

Abstract

The biggest crime is wastage of time. To use every minute of participants, the past experience shows the need of interaction of the author of a particular paper with other fellows working in that field of paper. A conference is like a place for forming a forum to make others also think, suggest and work in presented paper. If one research scholar will know about the complete paper at least ten days before the conference, he will come with prepared mind to discuss on that work. Mostly programs send to all attending fellows few days before. That contains only name of author and topic of the author. Which is insufficient for attending fellows to prepare about utilization of presented knowledge by other fellows just in few slides.

Keywords: Author's field. Biography of author, place of conference, new developments

1. INTRODUCTION

There is a chain of conferences all over the world for various topics, fields, levels, and subjects round the year. The time, money and resources applied are tremendous. But the output for this forum as an in depth work is not possible easily. Because the senior fellows are already have a field decided by them. To work on new field and innovate the application of presented work is mostly difficult for senior fellows. Results show that attendee adopts hardly utilize new work. Because just five minutes presentation may only introduce the topic. But after looking at usefulness of the topic may not give a boost to work as after that particular session, senior fellows are busy with other tasks. We can provide a new look to conferences by adopting few points like author's biography, previous papers, previous experience in practical life and place of symposium etc.

2. AUTHOR'S BIOGRAPHY

It is necessary to provide the entire registered fellow the biography of all the authors before ten days. By looking the biography, others can already come with the queries at the level of the author's experience. If we can provide a biographical sketch to registered members, we can give a chance to devoted fellows for interacting about related themes. Most of the time a person is already in the field of other attending person and may be in his

paper topics not clearly mentioned field of presenter. If already known field and work done is known, we can give chance to the new research scholar to give innovative ideas and may start work for research. Through conferences we can connect the common field researchers to work at wider range.

Interaction between the attendees is also very useful for new challenges arriving time to time all over the world. For example, my paper was selected for presentation at IEEE International Conference on Systems, Man & Cybernetics October 5-8, 2003. The Washington blackout was also on 14th August 2003. I was also selected as a volunteer for this conference. I was in good position to have an interaction at first meet and to decide for next detailed time for discussions on blackout. My field of research is power systems, which is very much related to collapses. Even my PhD thesis topic at IIT Delhi itself is related to voltage collapse. The conference was mostly related to artificial intelligence related fellows. My idea was to explore the applicability of artificial neural networks for voltage collapse avoidance to overcome blackouts. This was a very good time for this burning topic to be discussed between different fellows from all over the world to attempt for artificial technique applications. We are already at the very high level of formal methods applications at controlling centers to avoid black outs. still we are facing this

problem. I decided to enter the fellow workers of artificial intelligence from all part of the world to think proceed to over this problem.

Awareness about the participants from different parts of the world, working some close to voltage collapse, discussion was possible about the latest blackout on the spot. Or possibly we can visit affected bus bars with the local senior fellows. So the interaction between the attending author would have been given a boost to the practically implementation of the artificial problems in front of the fellows. So better the availability of the biographical sketch of the presenters with all attendee may also lead to solution of so many problems, which are very useful for the human beings.

3. PROPER TIME FOR DISCUSSION

The discussion time provided is very short. Because of time constrains to complete the session of particular theme and that is also confined for a particular topic of the paper. If we provide biographical sketch in advance with all possible contact details that will help both the fellows from same field to fix a time during conference or after conference or possibly that both are from the same route can fix journey together. This will help in utilization of time money and resources. For example I presented a paper in international conference HiPC at Bangalore. I was traveling by train with so many others attendees of the same conference but none of us interacted with each other because of no pre information available, although the run was about 24 hour. Then in next year we tried to pass the information to other attendees just by collecting e-mail ID with the help of organizers and surprisingly that caused a complete group of more than 70% attendees. And before commencement of the conference most of attendees travel together and already preplanned shortly discussions.

4. EXPENCES REDUCTION

By interaction of the attendees few days before the conference can help in minimization of the expenses also. As if someone already from the same place can help others to suggest cheap hotels or place to stay to give chance to research scholars from low level in money constraints. Some times the students are having very good ideas at

graduation level, but international conferences in their field of work are dreams for them due to high expenses. If we know each other we can bring our student working on very special field but needs someone to explore his or her ideas. My student of graduation final year invented a car locking system through mobile phone, which provides a facility of locking car by SMS, or by giving a missed call only, and you will be alerted by SMS on your mobile if someone enters in your car. The idea is with him at local level, but to present at higher level he needs someone to show. This may give him boost to come up at higher levels. If we are aware of other persons work in this field, we can ask for good place of presentation for this idea, as well to innovate new dimensions of the research at international level. If a student is aware of the delegates comings to conferences he can meet and satisfy for presentation at higher level by other co-other of the similar field.

2. CONVERT BY CHANCE INTO BY CHOICE

To enjoy everywhere convert by chance into by choice. By interacting with the attendees of the same field will make the attending person into by choice. Sometimes the presenter is having so many examples with the work but unable to give detailed presentation due to time constraints. Interaction in advance may give a chance to rethink about the detailed possible uses of the system. Think about maximum utilization of the three days stay at conferences. Few conferences have this type of conditions by the organizers to the scholarship awardees for the students. Recipient of the scholarship for travel and stay is provided at International conference for High Performance Computing (HiPC) at merit basis from country. The condition is that every student I supposed to stay and attend every session. This condition is good for avoidance of misuse of scholarship, because originally the cost to attend, register and stay is very high at international level. But if students are aware of other fellows coming to conference they can decide to interact and think for proper utilization of the conference. Otherwise to understand every session paper is almost difficult if the formula is not adopted for converting by chance into by choice.

Another Example

My third year student wants to develop a battery-operated car. He needs some expert from this field. I suggested that first try to attend the local conferences where people of international levels are attending the conferences. Mostly professors from IITs working in these fields are very expert. He was just started saying that how we will know that who is attending the near by conference so that he can attend the conference with me with prepared mind about the ideas and implementation of the idea. So this seems to be very necessary for providing biographical sketch of the attending fellows at National level conferences also.

5. PLACE OF LUNCH

A discussion for same field presenters is easily possible if we provide a sitting round table lunch. Only for standing lunches a concentration part is with the balance of plate, with thoughts of remaining items to be taken from place of various items. If few tables containing eating items, may provide a same field researchers to sit nearby and introduce with next possibilities of share of the knowledge. If one fellow is interested to ask something from senior fellow of same theme, during standing lunch a small time is available for both to interact. With previous interaction through mail, may give a fixation of discussion time at conference after during session. A time of lunch is best possible place of first interaction. While sitting on table, one can interact easily and supporting bond is created. Standing while eating causes so many time interruptions from senior fellows. Interestingly that senior's interruption will be only for hello, hi. But the research scholar came with certain doubts after gone through the seniors previous papers need concentrated attention.

6. SEARCH FOR RESEARCHERS

Every person is having good qualities. The beauty of the organizer is to find diamonds from these registered fellows. Possibly a fellow is having very good idea in him or her self, but not in position to present a paper by traveling long. By giving interaction platform for these types of research scholars of new faculties, by the seniors, we will the hidden diamonds are ready to shine. If someone is able to understand the basic idea of researcher, we can provide facility to present the basic idea. Author can request the senior fellow who understood the

paper, for the presentation. Queries clarification is possible through biography and available contact numbers before during or after the conference. Every research is called research because all the things are already available in the nature. A person with concentrated and confined devotion becomes a researcher by finding out that particular available natural cause. If we are interacting with similar thoughts fellows we can give new research dimensions for complex problem solutions. So by providing address, phone number and email IDs of attending persons we can provide same thing to our other research scholars and faculties so that they can interact each other by what ever possible resource. This meeting arrangement may be after, before or during this conference as well other occasions.

6. USEFUL FOR GRADUATION STUDENTS

Very interesting observation result is obtained by using graduation students from institute in conferences. Surprisingly I received tremendous potential work among students. I tried my knowledge obtained at IIT Delhi and applied to graduation level student according to their field of interest. After some hard work with various topics of the students choice, so many students turned up with there own little ideas for writing paper with me. Instead of converting them in my field I started work on their field first. But after winning the hearts of the graduation students they realized to adopt my field.

I started writing their ideas to be published at national conferences, symposiums and competitions at various parts of the country. Almost papers were selected and presented by students. Our Institute also provided financial help to them. For higher studies my student was asked for any publication. After sitting with him time to times the paper was prepared at the standard level. Although he could not dare to present at conference but his continuous sitting for preparation of presentation cause him able to understand and explain at interview for job. He applied abroad. Surprisingly he got an offer from Canada with comments that you are over qualified. They gave him option to join either at Canada or USA. So if we have proper interaction of the persons from various conference we can utilize the potential of the students at maximum extent so as to give our students chance.

That paper presentation was helpful because the attendees were of international level and we interacted with all possible give him a chance to appear at international level.

7. PLACE OF CONFERENCE

This is surprising to give the beauty of the hotel or conference place a big hand. Mostly organizers show the place of conference to such extent that others are coming for a picnic and enjoy the three days of conference. Naturally providing good facilities to the attendee always give rise to increase in the registration fees. Continuously increase in fees is causing trouble to research scholars as well as new faculties, which are just in the stabilization position. Few interesting words regarding attraction of place gives something about rise to persons having facilities but less interest in conference rather to a poor scholar just fighting for strong forum for his field of research. Most of the universities have very good auditorium for conferences. Just giving few limited author and research scholars' free or minimum charges will drastically reduce the expenses. They will also help in organizing at full extent. Few very special delegates could be offered stay at hotels near by. Students may stay at hostel rooms will give rise to a chain of contacts among students.

8. CONCLUSIONS

The better use of hard work done from intellectuals from different field needs utilizing facilities may give an exploration to knowledge. But prepared mind always helpful for united work for the implemented work.
